To whom it may concern,

It is with pleasure that I write this letter in support of Mr. Robert Schlaudecker. Robert started working in my Clinical Electrophysiology Laboratory at Yale/West Haven VAMC in July 1996. He functioned as the research co-ordinator for a large number of electrophysiological studies including EEG and evoked potentials. He acquired and mastered the necessary techniques in record time. He showed resilience in dealing with the very many technical problems that arise as a matter of routine in electrophysiology laboratories. His psychology background was a major asset in assuring that clinical scales are administered and interpreted properly.

Robert, also, is a good teacher. He was able to teach and train a number of other personnel who worked in the lab. the various concepts and techniques required.

On a personal level, Robert is a pleasure to work with. He is psychologically and philosophically minded. His breadth of experience, particularly his world travel, allows him to uniquely contribute to any group that he joins.

I have no reservations on recommending Robert to the position he is applying for. I am confident he will have a bright and successful future as a Clinical Psychologist or any other career he may choose to pursue.

if you have any questions please feel free to contact me.

Sincerely,

Nashhat Boutros, M.D.
